Free EBCT heart scan

MEN 40+ • WOMEN 50+ • SPOUSES INCLUDED • NO COST TO YOU • NO COMMITMENT

WHY DO DOCTORS RECOMMEND A BASELINE HEART SCAN?

Heart disease is the #1 killer of Americans, with 1 in 3 dying prematurely and **7 times more women** dying from heart disease than breast cancer. Stress tests miss most people at risk. And most heart attacks occur in people with “normal” cholesterol.

There is no need to remain vulnerable to death by heart attack. You can stop and even reverse progression, and a heart scan is the first step.

#1 killer

Heart disease is the
leading cause of death
in America

AN EBCT SCORE IS THE MOST RELIABLE INDICATOR OF HEART DISEASE

Your heart is worth the best. The EBCT scanner is considered the “**gold standard**” of **coronary calcium imaging** and the most definitive assessment of heart disease risk. Other scans expose you to 3x more radiation and are 66% less accurate.

Simply lie down, fully clothed, hold your breath for a few seconds, and the scanner will take pictures between heart beats. That’s it! We’ll have results back to you within 7 days.
